

STI will not knowingly procure, use or supply any counterfeit item or material. Our policy is zero tolerance to Counterfeit parts

STI (as a Contract Electronics Manufacturer) is committed to the prevention of counterfeiting and conducts all business activities in compliance with rules and regulations applicable to the industry, in any location that we may operate.

STI does not use counterfeit products and condones their use at any stage of the product manufacturing cycle that we carry out on behalf of our customers. We also expect our supply chain to adhere to our ethical business standards and mirror our practices and procedures.

To support this policy, STI seeks to ensure all employees are vigilant to counterfeit items through training and experience.

STI maintains processes to ensure purchases are only made directly from approved suppliers such as OEM's, manufacturers, franchised-distributors or any customer-approved source.

Should a suspect counterfeit or counterfeit product be found, STI shall quarantine such material and report the findings to the supplier and appropriate authorities.

We constantly evaluate our supply chain performance and will consider the extent to which a supplier has failed to reasonably comply with this statement. Should the effort of the supplier be determined to be deficient, STI will take any appropriate action, including terminating our relationship with the supplier.

This policy statement is reviewed annually.
